

## Prescription Treatment® brand Attain® TR Total Release Insecticide/Miticide ...

Is a ready-to-use, ultra low volume insecticide fogger that controls a wide variety of greenhouse insect pests, including mites.

### Labeled for use in ...

Greenhouses on Bedding Plants, Cut Flowers, Flowering Hanging Baskets, Foliage, Potted Flowering Plants and Ornamentals.

### Attain TR controls ...

Aphids, Fungus Gnats, Mealybugs, Mites, Thrips and Whiteflies (see label for additional insects controlled).

### The active ingredient, bifenthrin ...

Is an advanced, third-generation pyrethroid. Bifenthrin is the same active ingredient found in Talstar®, one of today's most popular ornamental insecticides.

### Total release foggers ...

Provide a unique ULV application system that efficiently delivers about 1.5 billion 10-20 micron-sized particles of active ingredient per unit in minutes. These particles are free of water and inert materials typically associated with other application methods that can contribute to disease and/or phytotoxicity problems. Total release foggers insure uniform coverage with multiple delivery points throughout the greenhouse. The active ingredient is filtered onto the top and bottom leaf surfaces as it circulates throughout the greenhouse.

For additional information, please see the label and MSDS section of our website, [www.wmmg.com](http://www.wmmg.com).

Talstar® is a registered trademark of FMC.  
Orthene® is a registered trademark of Monsanto Company for acephate insecticide.

## Attain TR provides ...

- The effectiveness of Talstar and the convenience of total release.
- A 12-hour REI (reentry interval) and a quick start to the REI clock ... just 10 minutes after application.
- Safety on a wide variety of plants, including open blooms.
- A total release insecticide application that is effective on mites.
- Efficiency and profitability. Only 5 cans per acre are needed when the 6 oz. size is used.

## Operational Benefits

Use Attain to get the same active ingredient as Talstar in a ULV total release application. Total release insecticides offer quick, easy application, thorough coverage, excellent plant safety, low worker exposure, and short reentry times.

Attain effectively controls aphids, fungus gnats, mealybugs, mites, thrips and whiteflies, along with several other secondary insect pests. Attain can be used safely on poinsettia bracts in color and flowering plants in full bloom. Attain can be space mixed with Preclude® or Orthene® Total Release Insecticides.

## Product Specifications:

- Active Ingredient: bifenthrin
- Insecticide Class: third generation pyrethroid
- Reentry Interval: 12 hours
- Sizes:
  - 16 oz. total release canisters
  - 2 oz. and 6 oz. Micro TR canisters
- Packed: 12 per case
- Application Rates:
  - 16 oz. canister covers 1,500-3,000 sq. ft.
  - 2 oz. Micro TR canister covers 1,500-3,000 sq. ft.
  - 6 oz. Micro TR canister covers 4,500-9,000 sq. ft.
- Signal Word:
  - WARNING—16 oz. canister
  - CAUTION—2 oz. and 6 oz. canisters

See Total Release Technical Bulletins for additional can placement information.
