

PROVENANCE FOR MYRMEPHYTUM SPECIES WITH YELLOW FRUITS FROM THE PHILIPPINES

Seeds of this species were sent from the Philippines to a friend in Singapore in 2009. He sent me a seedling in August of 2010.

When it flowers it produces yellow fruits. The only other *Myrmephytum* in cultivation at that time was the red fruited *Myrmephytum beccarii*.

So, this one has been in cultivation as “*Myrmephytum* species with yellow fruit from the Philippines”. Recently it has been selling in Europe as *Myrmephytum selebicum*.

This is a photo of the plant I am sending you. It is in a 2-1/4 inch pot and was grown from a seed sown on September 30, 2016.
